

Panel on Experimental Facility aspect domain-wise

FIREWORKS

- Participants of this panel:

Participant	Domain
Serge Fdida, UPMC	Management & Service Aware Networking
Josep Martrat, Atos / Tasos Gavras, Eurescom	Future Internet Service Offers
Stefan Fischer, U Lübeck	Real-World Internet
Nick Wainwright, HP Labs	Identity and Trust

FIREWORKS

Questions to be addressed

- What expectations are there from other domains for FIRE facilities?
- More specifically:
 - What kind of testing do the scenarios developed require?
 - In which phase?
 - Provided by whom?
 - With what kind of operational wishes etc.?
- How can the expectations be met by facility providers and by when?

FIREWORKS

Input from RWI

- Need for standardized resource descriptions
- Search for necessary sensors for an application should be possible
- Test beds should be as close as possible to the real scenarios, BUT RWI scenarios are rather complex, it is unclear how and whether they can be tested
- Real world is chaotic, many parameters are not known and will change
