

**Panel: FIRE challenges, session 3**

# ***Existing offers as Future Internet Testbeds***

**Moderator: Max Lemke**

**European Commission**

**Introductions:**

- **Timur Friedman (UPMC), OneLab**
- **Anastasius Gavras (Eurescom), PII**
- **Mauro Campanella (GARR), FEDERICA**

***FIRE Launch Event, Paris 10 September 2008***

## Points to be discussed (initial suggestions)

- Which kind of technologies/services concepts can be tested on your facilities? To which degree are they open?
- What are the communalities - what are the distinct features and characteristics of the approaches?
- How do you plan to dynamically expand the scope of your facility based on the user needs?
- How do you see the role of industry vs academia – both on the provider and on the user side?
- Are the approaches compatible or complementary? How can these prototypes emerge and expand to potentially converge to become the European FIRE Facility?
