FIREWORKS

## 4. Building synergies with national and international initiatives - Questions

- *Are the interests at international, European, national, and regional levels in line – what are potential conflicting interests?*
- *What are the specific considerations on the regional level that need to be taken into account, for example local labor markets, benefit for small SMEs, structural development, etc.?*
- *What are the synergies between different levels - what can be done at national (and regional) level and what must be done at European and international level?*
